

## LUTAPROST® 250

### Injectable Solution

Luteolytic agent of reduced dose

### Formulation

Cloprostenol sodium 0.263 mg, excipients q.s. ad 1 mL.

### Indications

Synthetic analog of prostaglandin, structurally related to prostaglandin F<sub>2a</sub>. Powerful luteolytic agent that induces functional and morphological regression of the luteal body (luteolysis). After 2 to 4 days, luteolysis is followed by return to oestrus with normal ovulation. Its clinical applications can vary according to the target specie.

### Dosage and Administration

Cows: 2 mL (intramuscular) or 1 mL (submucous-intravulvar); mares: 1 mL (intramuscular); sows: 0.7 mL (intramuscular) or 0.35 mL (submucous-intravulvar); sheep and goats: 0.6 mL (intramuscular) or 0.15 mL (submucous-intravulvar); camelids: 1 mL (intramuscular).

### Commercial Presentation

Bottle x 10 mL, Bottle x 20 mL, Bottle x 30 mL,
