

# Proxifen® 23 L.A.

Elimina las infecciones,

**SIN RIESGOS**

Trata los problemas infecciosos y protege  
la gestación de tus animales

# Proxifen® 23 L.A.

Suspensión Inyectable

Actúa de manera óptima frente a múltiples enfermedades gracias a su amplio espectro y a la acción antiinflamatoria del ketoprofeno.

## Alta Efectividad

### ■ Amplio Espectro

Acción contra bacterias Gram positivas, Gram negativas y espiroquetas.

### ■ Efecto antiinflamatorio

Gracias a la presencia del ketoprofeno calma el dolor y reduce la fiebre.

### ■ Larga acción

Vehículo de acción prolongada.

Elimina las infecciones,  
**SIN RIESGOS**

## Protege la reproducción

### ■ No abortivo

El ketoprofeno es un antiinflamatorio no esteroide, por lo tanto no es abortivo. Excepto durante el último tercio de preñez salvo estricta necesidad y bajo supervisión del médico veterinario.

Su uso en hembras preñadas puede inducir coloración anormal en las piezas dentarias del neonato.

Long action antibiotic and non-steroid anti-inflammatory

## Proxifen® 23 L.A.

- **BROAD SPECTRUM:** For use against Gram-positive, Gram-negative and spirochetes bacteria.
- **RAPID DISTRIBUTION:** Because of its rapid distribution, therapeutic blood levels are reached in less than one hour.
- **NEW:** Proxifen® 23 L.A. contains Ketoprofene, which makes it a latest generation anti-inflammatory.
- **PROLONGED ACTION:** Prolonged action vehicle.
- **NON-ABORTIVE:** Ketoprofene is a non-steroid anti-inflammatory, which means that it is non-abortive.

## Specifications according to species:

**Pigs:** Bacterial enteritis (diarrhea, colibacillosis), pneumonia, leptospirosis, atrophic rhinitis, erysipelas, post-surgical infections, umbilical/joint infections. In pigs, it is useful as an adjuvant in the control of infectious enteritis (diarrhea in newborns, colibacillosis) in piglets and MMA syndrome (mastitis-metritis-agalactia), secondary bacterial infections and viral infections.

**Cattle:** Pneumonic transport complex (pneumonia, transport fever), whitlow, diphtheria, bacterial enteritis (diarrhea), actinobacillosis, leptospirosis, anaplasmosis, **anthrax** (carbuncle), infected wounds, acute metritis, hoof rot, septicemic mastitis, umbilical/joint infections, dermatophilosis and all non-specific infections, secondary bacterial infections and viral infections.

**Sheep and goats:** Pneumonia, symptomatic carbuncle, septicemic mastitis, bedsoniasis, prevention of post-natal infections and all specific or non-specific infections cause by micro-organisms susceptible to oxytetracycline, secondary bacterial infections and viral infections.
